

SHEAR&BALER EMME H

RENEWING TRADITION

The "EMME" shear&baler is a versatile machine, suitable for processing different types of scrap. It comes in two different configurations, "H" and "S" type.

"H" type is a compact version, one-piece body self-supporting frame, does not require foundations and special permits. Shear&balers in this category are easy to install and reposition. In the rear part of the machine, on the opposite side of the shear, there is structure that supports the longitudinal compression cylinder and the diesel/ electric engine, the electrical and hydraulic system necessary for its autonomous operation. The rear structure is protected by a thick steel sheet cover. It is also included a cover in tubular structure to protect the shear head and covers to protect the cylinders of the lids.

The "EMME" shear&baler is equipped with the original TAURUS compression box "swinging wings" system SBxc (patented) with over stroke on both wings. The "EMME" shear&baler can also produces bales that are automatically ejected.

SHEAR&BALER EMME H

EMME		Mh117	Mh127
Cutting force	tons	1000	1100
Clamp	tons	280	280
Bale dimension	mm	900x600	900x600
Open box width	mm	2800	2800
Box length	mm	7200	7200
Cylinders per wing	n	3	3
Max. compression force (each wing)	tons	450	450
Main cylinder compression force	tons	150	150
Main electric power	kw	2x160	2x160
Diesel engine	hp	560	560
Indicative weight	tons	130	140
