

World leader in vehicle  
de-pollution technology

**SEDA  
HV Container**  
527745

**Safe storage solution  
for lithium-ion batteries**

The SEDA HV container for vehicle batteries ensures safe storage against underlining dangers from defective and non-defective electric batteries.

The stationary container has 4 floodable compartments controled by internal sprinklers for defective batteries or for batteries with underlining dangers.

When a battery reacts this chamber is exposed to very high temperatures. If this chamber exceeds 80 ° C, the sprinkler system activates flooding the chambers with water stored above the container. This versatile system can be used in many different areas including extremely cold climates.

**Sprinkler system**

**+ Your benefits:**

- Storage of critical & non critical LI IO batteries
- 4 compartments with cooling, extinguishing & flooding system for damaged batteries
- 4 compartments for storing undamaged LI IO batteries
- Refillable water containers
- Stand-alone system
- Can also be installed in cold areas - cooling antifreeze

**Safe storage of batteries in stationary HV containers ...**
